La Cala de Mijas /

Modern One-Floor Villas

The Vista Collection is a new project of luxury single-storey villas, designed to be energy efficient and stylish.

The solar panels enable this property to generate more electricity than it uses, and the single floor design helps reduce energy consumption.

There are different villa layouts to choose from in this project. The design of Villa Optima represents bioclimatic design and smart use of space.

The property includes 4 spacious bedrooms, 2 of which are ensuite, a spacious and bright living/dining area, a fully fitted kitchen with quality appliances, a private garden area with stunning infinity pool, and the future-proof solar panels. A full furniture package is also available.
